

NEW | **BAMBOO CARBON**

Bamboo Carbon towels are not only exceptionally soft and luxurious; they also have unique characteristics that are beneficial both inside and outside your sauna.

- Naturally anti-bacterial, anti-fungal and deodorizing
- Emit 91% of infrared rays for full exposure
- Block up to 98% of UV rays when used in the sun
- Highly absorbent for water and sweat

NATURAL INFRARED EMISSION

NATURALLY ANTI-BACTERIAL

NATURALLY DEODORIZING

HIGHLY ABSORBANT

NATURAL PLANT CHARCOAL

WHAT IS BAMBOO CARBON?

Bamboo Carbon fiber is made with selected four-year-old bamboo which is air dried, then charred at 800°C. Ground into fine nano particles, it is added into extruded synthetic fibers to create yarn and then woven into fabric. Because of the structure and composition of bamboo, Bamboo Carbon has a high surface area and a variety of minerals that give the unique attributes of odor absorption, anti-bacterial, anti-fungal, excellent absorbency and infrared emission. This combination makes it great for use within your sauna, and for daily bath use.

FREQUENTLY ASKED QUESTIONS:

How is Bamboo Carbon deodorizing?

This eco-friendly fabric has an extremely porous structure and provides minerals to absorb moisture, prevent bacteria growth, reduce odor and disrupt the spread of germs and fungi.

Does Bamboo Carbon lose its properties after washing?

During the manufacturing process, Bamboo Carbon nano particles are disbursed inside the fibers rather than on their surface. Therefore, Bamboo Carbon products are washable without diminishing the effectiveness.

What color is Bamboo Carbon available in?

To keep its natural properties, all Bamboo Carbon products are the natural gray color of the fiber. No dyes or bleaches are used.
